20.5 ± 1.5	11.5 ± 1.0	7.0 ± 1.0	3.5 ± 0.5	5.0 ± 1.0	Φ0.55 ± 0.08	1.5 Max.

Note:

a: L₁ can be customized as required from 3.5 mm to 5.0 mm.

Description

Thermally Protected Resistor (TPR) is a unique type of power resistor, where Alloy Thermal-Link (ATCO) and Fusible Wirewound Resistor (RXF) are in series encapsulated in a ceramic case with silicone cement.

Features

- (20.5 × 11.5 × 7.0) mm
- Over Temp. Protection
- Small Fault Current Protection
- Short Circuit Protection
- Inrush Current Protection
- RoHS Compliant

Applications

- Switch Mode Power Supply (SMPS)
- Adapters
- Home Appliances and Office Appliances (TV, Washer, Fridge, Printer, etc.)

Glossary

Item	Description
RXF	Fusible Wirewound Resistor A power resistor which is made by winding a resistive element on a ceramic core, and the core is coated by insulation coating. It intends to interrupt a current flow at a predetermined time when the current exceeds the predetermined value, It is non-resettable.
ATCO	Alloy Thermal-Link Alloy Type Thermal-Link, alloy is the thermal element. Thermal-Link is A non-resettable device incorporating a THERMAL ELEMENT which will open a circuit once only when exposed for a sufficient length of time to a temp. in excess of that for which it has been designed.
R	Rated Resistance Resistance value for which the resistor has been designed, and which is generally used for denomination of the resistor.
I_N	Rated Current $I_N = \sqrt{\text{Actual Power} / R}$
U_N	Rated Voltage The d.c. or a.c. r.m.s. voltage calculated from the square root of the product of the rated resistance and the rated dissipation.
T_f	Rated Functioning Temp. The temp. of the Thermal-Link which causes it to change its state of conductivity with a detection current up to 10 mA as the only load.
Fusing Temp.	Fusing Temp. The temp. of the TPR which causes it to change its state of conductivity is measured with silicone oil bath in which the temp. is increased at the rate of 0.3 °C to 0.5 °C / min, with a detection current up to 10 mA as the only load.

Marking

Note:

a: The first XX means production year code,

The last X means production quarter code.

eg: "191" means that the production time is the first quarter of Y2019.

Note: The color of schematic diagram is for reference only

Operating Principle

Instruction:

$$R_{RXF} \geq 100R_{ATCO}$$

- R_{RXF} : The Resistance Value of RXF
- R_{ATCO} : The Resistance Value of ATCO

$$T_{RXF} \geq 5T_{ATCO}$$

- The Fusing Temp. of RXF (T_{RXF}): 1,200 °C ~ 1,500 °C
- The Fusing Temp. of ATCO (T_{ATCO}): 115 °C ~ 221 °C

I_N is rated current

I_1 is conventional fusing current

• Small Fault Current Protection

At small fault current, $I_1 < I < I_2$, ATCO senses the heat that generated by RXF, when the ATCO reaches the fusing Temp., ATCO opens the circuit quickly. In this case, RXF keeps intact and ATCO opens.

• Medium Fault Current Protection

At medium fault current, $I_2 < I < I_3$, RXF opens in a short time because of much heat generated, meanwhile, RXF conducts its residual heat to ATCO. In this case, both RXF and ATCO open.

• Large Fault Current Protection (Short-Circuit Protection)

At large fault current, such as short circuit, $I > I_3$, RXF opens instantly but ATCO keeps intact because the fusing time of RXF is too short to generate enough heat. In this case, RXF opens and ATCO keeps intact.

Fusing Time Current (For Reference Only)

TPR can open effectively at lower power multiples to protect the circuit timely (ambient temp. 25 °C ± 2°C).

Surface Temp. Curve (For Reference Only)

The surface temp. of TPR is always at a lower level, when small fault current happens to the device, TPR is able to open the circuit timely without additional damage (ambient temp. 25 °C ± 2°C).

Performance Test

Mechanical Performance Test

Item	Test Condition	Criterion
Tensile Test	A pin withstand 10 N × 60 seconds	No Visible Damage, $\Delta R \leq \pm (1\%R + 0.05 \Omega)$
Twist Test	A pin 2 mm away from body, bent 90°, twist 180° × 2 times	No Visible Damage, $\Delta R \leq \pm (1\%R + 0.05 \Omega)$

Environmental Test

Item	Test Condition	Criterion
Temp. Cycle	1. - 55 °C × 30 minutes 2. Room Temp. × (10 to 15) minutes 3. 85 °C × 30 minutes 4. Room Temp. × (10 to 15) minutes 5. 5 Cycles from Step 1 to Step 4	$\Delta R \leq \pm (2\%R + 0.05 \Omega)$

Electrical Performance Test

Item	Test Condition	Criterion
Short-Time Overload	$2.5U_N \times 5$ seconds	Legible Marking, No Visible Damage $\Delta R \leq \pm (2\%R + 0.05 \Omega)$
Insulation Resistance	Foil Method: Apply 500 VDC between lead wire and the metal foil.	Insulation Resistance $\geq 1,000 \text{ M}\Omega$
Voltage Proof	Foil Method: Apply 900 VAC × 1 minute between pin and the metal foil.	No Breakdown or Flashover
Surge Test	Combination Wave Generator (1.2/50 μs , 8/20 μs , 2 Ω), 10 Times, 1 minute Interval.	Resistor shall not open after the test
Fusing Test	Apply test current to the resistor (constant current source).	Fusing Time ≤ 60 seconds
Solderability	Solder Bath (non-activated flux), Scaling Powder: 25% Rosin Alcohol, Depth of Immersion (From the seating plane or component body): (1.5 to 2.0) mm, Time of Immersion: (2.5 $\pm$ 0.5) seconds.	Soldering Area $\geq 95\%$
Fusing Temp.	Silicone oil bath: temp. rise rate is 0.3 °C/min to 0.5 °C/min, detection current $\leq 10 \text{ mA}$.	216 °C ~ 221 °C ($T_f = 221 \text{ °C}$) 143 °C ~ 150 °C ($T_f = 150 \text{ °C}$) 138 °C ~ 145 °C ($T_f = 145 \text{ °C}$) 128 °C ~ 135 °C ($T_f = 135 \text{ °C}$) 123 °C ~ 130 °C ($T_f = 130 \text{ °C}$) 119 °C ~ 125 °C ($T_f = 125 \text{ °C}$) 109 °C ~ 115 °C ($T_f = 115 \text{ °C}$)

Soldering Parameters

Recommended Hand-Soldering Parameters

Solder Iron Temp.: $(350 \pm 5) ^\circ\text{C}$

Soldering Time: 2 seconds Max. ($115 ^\circ\text{C} \leq T_f \leq 150 ^\circ\text{C}$)

3 seconds Max. ($T_f > 150 ^\circ\text{C}$)

Wave Soldering Parameters

The Wave Soldering Parameters are for reference only, before TPR is for practice usage, relative validation is recommended.

Item	Temp. ($^\circ\text{C}$)		Time (second)
Preheating	$115 ^\circ\text{C} \leq T_f \leq 150 ^\circ\text{C}$	$T_f > 150 ^\circ\text{C}$	60 ~ 100
	80 ~ 90	90 ~ 120	
Dwelling	260 ± 5	260 ± 5	4 ~ 5

Packaging Information (For Reference Only)

Item	Tray	Carton
Quantity (PCS)	200	2,000
Gross Weight (kg)		7.5 ± 10%

Unit: mm

ATTENTION

TPR

Cold Resistance Test

1. If product TCR is not less than 350 ($10^{-6}/^{\circ}\text{C}$), the measured resistance value shall be corrected as the relative resistance value under 25 °C according to TCR formula.
2. Resistance Measurement (4-terminal test).

TPR

Replacement

As TPR is a non-resettable product, for safety sake, please use the same type of TPR for replacement.

Usage

1. Do not touch the resistor body or pins directly when power is on, to avoid burn or electric shock.
2. When air pressure is from 80 kPa to 106 kPa, the relative altitude shall be +2000 m to - 500 m.

Storage

1. Please store TPR with ambient temp. 10 °C ~ 30 °C and relative humidity 30% ~ 75%.
2. Do not store the TPR at the high temp., high humidity or corrosive gas environment, avoid influencing the solderability of the pins, please use them up within 1 year after receiving the goods.
